Keeping families informed, connected and protected.

Introducing the Two-Way Talking Touch Screen, a convenient color touch screen for obtaining at-a-glance status of your home and property or controlling your home systems. Designed to work with your Simon XT1 and Simon XT v1.3 (or later versions) control panels, this LCD screen provides wireless operation of all security system functions. It can even be set up to control your home's lighting and HVAC, provide current weather conditions, as well as a four-day forecast.

Convenient home security plus a whole lot more

powered by ALARM.COM

With optional GSM reporting and Alarm.com features, Simon XT1 and Simon XT® offers remote monitoring and control of your security system for convenient and effective home protection. View household activity online, check in on sick or elderly loved ones, and even keep tabs on vacation properties.

Options to make the most of your system

Status & Settings

Quick, at-a-glance home status provides a complete view of home systems including security, indoor temperature and weather.

Securing your home, and protecting your family

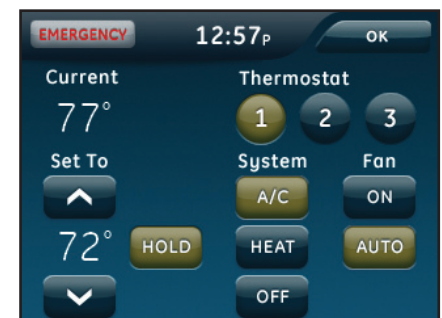

This wireless touch screen makes it even easier to secure your home. Emergency fast-action keys allow you to quickly summon Fire, Medical or Police assistance with one button, while a backup power supply keeps the system operational during power failures.

The touchscreen works together with your Simon XTi or Simon XT v1.3 system for added convenience and functionality.

Lighting and thermostat control for lower utility bills

This touch screen conveniently allows you to control your Z-Wave® thermostat and lights from a single access point, or with multiple touch screens throughout your home. You can set an automation schedule to adjust your thermostat when the security system is armed to help reduce energy usage and save on utility bills.

Thermostatic control makes it easy to set automation schedules in conjunction with security events to save energy and reduce utility bills.

Always prepared

The touch screen can also provide you with helpful weather information to plan your day or the week ahead. Featuring current weather conditions as well as a four-day forecast, you can be prepared for what nature has in store. And since these wireless units can go almost anywhere in the home, it can keep you up-to-date before you head out the door.

Four-day weather forecast provides helpful information quickly and conveniently.
