EMEA: fireandsecurityproducts.com

Australia: www.interlogix.com.au

Overview

The TVN 71 series is a Network Video Recorder with an incoming bandwidth of 576 Mbps and capable of connecting up to a maximum of 128 cameras. The recorder is available in a RAID and non-RAID configuration.

TVN 71 models are compatible with TVN71 FW 1.0 or above.

Enhancement

- This firmware provides support for the eight TB Western Digital Purple hard drives (WD81PURX) for non-RAID TVN 71 recorders.

Known issue

- When a TVN 71 that uses push notifications to TVRMobile 3.0 is then updated with this firmware, the push notifications will stop working.

  To receive push notifications again, the recorder must be restored to default settings. The recorder needs to be removed from TVRMobile, and then added again. The push notifications also need to be enabled again. This is an issue with TVRMobile and will be fixed in a next version.

Contacting support

For help installing, operating, maintaining, and troubleshooting this product, refer to this document and any other documentation provided. If you still have questions, contact us during business hours (Monday through Friday, excluding holidays).

Note: Please be ready at the equipment before calling.
