

# NetworX "Operator" Telephone Interface Module

## OVERVIEW

The NetworX "Operator" Telephone Interface Module is a microcomputer controlled telephone interface module that may be added to NetworX control panels. The "Operator" converts any touchtone telephone to a system keypad and allows system functions to be accessed via telephone on premise or off-site. There are 48 separate zone descriptions that may be programmed to fit the owner's needs. Each zone/output description is programmable using the 182-word library list.

## STANDARD FEATURES

- Converts any touchtone telephone to a system keypad
- Allows system functions to be accessed via telephone on or off-site
- Each zone/output description is programmable using the 182 word library list
- Compatible with the NX-6, NX-8 and NX-8E control panels
