Access Control Solutions

Preventing unauthorized access into schools can be extremely challenging. Locking doors with chains is risky and presents safety concerns. So what's the ideal way to protect a school that has open access? At Interlogix, we believe it's a combination of good planning, common sense and the right products.

That's why we offer a variety of access control products to meet a broad range of security needs. From simple, browser-based systems to fully integrated solutions, Interlogix™ systems produce easy access management of buildings, hallways and individual rooms. For example, you can program the system so that visitors can access the school's general entryway, but they may not proceed down hallways without obtaining access through the administration office. Our experienced team of system integrators will work with you to design the optimal solution for your application.

Access Products

verex

Verex combines intrusion, access control and video management into one seamless, integrated access control system. With up to 8,000 doors of access control, Verex can be configured as a multi-site management system for small to large school districts. Plus, it's easily scalable to accommodate future growth and changing needs, so you can enjoy advanced, flexible protection even on a tight school budget.

truPortal

Simple to install and use, TruPortal™ is a browser-based access control system that can be accessed from just about anywhere with a Web-enabled device. It offers up to 64 doors of access control and advanced features that are critical to school security, such as a "School Lockdown" function. TruPortal integrates seamlessly with TruVision® video products to deliver a complete access control solution.

Feature Comparison

Compare TruPortal and Verex systems side by side to see which one is right for your school.

Feature	Verex	TruPortal
